

Capture Handwritten notes and illustrations with mobile notes from e-pens.

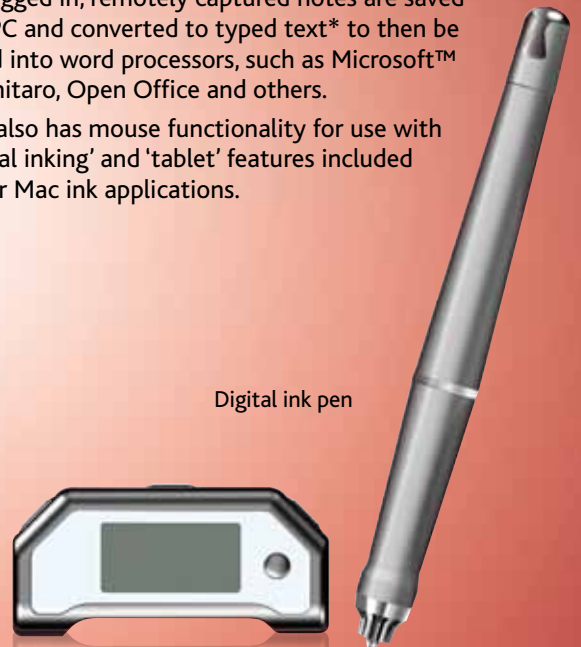

The easy way to make digital notes

Handwritten notes and illustrations are captured remotely using an ink filled digital pen and base unit attached to normal paper.

Once plugged in, remotely captured notes are saved to your PC and converted to typed text* to then be imported into word processors, such as Microsoft™ Word, Ichitaro, Open Office and others.

The pen also has mouse functionality for use with the 'digital inking' and 'tablet' features included with your Mac ink applications.

Digital ink pen

Pen Mode:

The digital pen and base unit can capture natural handwriting in real time while connected to your Mac or remotely while the base unit is disconnected. Once you have captured & saved your notes in the note manager software included you can back them up and recycle your paper. Notes can then be edited and converted to typed text with the MyScript recognition software included. From there you can export straight into applications such as MS Word® or Outlook®.

Mouse Mode:

Mouse Mode turns the digital pen into a mouse with hovering and 2 button functionality. In Mouse mode you can write directly into Mac ink applications such as iWork 08™, Adobe Illustrator™ or Adobe Photoshop™. Mouse mode speeds up the whole process of capturing notes by switching effortlessly between pen & mouse mode

Remotely capture your notes

Connect via USB

Save and back up your notes

Convert notes to typed text

Export or copy to word processing applications

Pen has tablet and mouse functions

Handwritten notes and illustrations captured remotely using an ink filled digital pen!

1 Attach the e-pens base unit to normal paper.

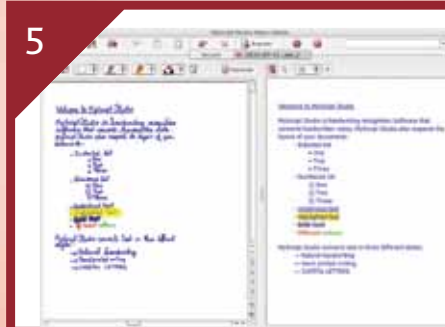

2 Write your notes as normal with the ink filled e-pens digital pen.

3 Upload your notes via USB to the note manager software.

4 Save and backup your notes and diagrams.
