

Capture Handwritten notes and illustrations with mobile notes from e-pens.

The easy way to make digital notes

Handwritten notes and illustrations are captured using an ink filled digital pen and base unit attached to normal paper.

Once captured, notes are saved to your PC and converted to typed text* to then be imported into word processors, such as Microsoft™ Word, Ichitaro, Open Office and others.

The pen:

- Also has mouse functionality for use with the 'digital inking' and 'tablet PC' features included with MS Vista™ or Windows 7™.
- Can annotate .jpg pictures already on your PC then share on Facebook, Flickr etc instantly.

Pen Mode:

The digital pen and base unit can capture natural handwriting in real time while connected to your PC or remotely while the base unit is disconnected. Once you have captured & saved your notes in the note manager software included you can back them up and recycle your paper. Notes can then be typed and converted to editable text with the MyScript recognition software included. From there you can export straight into applications such as MS Word® or Outlook®.

Mouse Mode:

Mouse Mode turns the digital pen into a mouse with hovering and 2 button functionality. In Mouse mode you can write directly into Windows Journal, and other Tablet PC applications such as MS OneNote™, MSN Messenger™ and MS Outlook™. Mouse mode speeds up the whole process of capturing notes by switching effortlessly between pen & mouse mode. With MS Vista™ and Windows 7™ there is the extra feature of the 'digital ink handwriting software' feature where you can handwrite directly onto office applications like MS Word® & Windows Journal®. You can also write notes over slides whilst presenting with MS PowerPoint and save or delete them as required.
