### The basics

The DigiScribble remotely captures handwritten notes and diagrams, then saves them to your PC where they can be converted to typed text or imported into Microsoft Office [applications](#). When connected digiscribble also has mouse functionality and you can use it with the 'digital inking' and 'tablet PC' features included with MS Vista.

DigiScribble is tagged with [DigiScribble](#) and [usb](#). Select a tag ([DigiScribble](#), for example) to find everything on FiveFWD about the subject.
